-----------	----

Projects: PRIM

PRIM makes one's most personal communication device, the mobile phone, a manageable communication portal. It forms a nucleus around contacts as the starting point for any communication as well as management of one's personal, work and social data. This is achieved through a dynamic address book that contains custom and personalized entries along with synchronization with multiple endpoints. The address book works in conjunction with various personal communication activities and events to form an ecosystem for comprehensive communication services.
